1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-26, drawn to a cDNA polynucleotide comprising a nucleotide sequence, classified in class 536, subclass 23.1.
 - II. Claims 27-38, drawn to a method for providing antifreeze or recrystallization inhibition properties, classified in class 435, subclass 7.1.
 - III. Claims 39-40, drawn to a TM 12.68 antibody/antiserum, classified in class 530, subclass 387.1.

Invention I encompasses amino acid sequences 2-39 and 44-48 and DNA sequences 2, 5-6, 9, 12, 15-16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38 and 44-47 which are separate and distinct having differing structures and function. Therefore, if Invention I is elected, applicant is required to elect a single DNA sequence and the encoding amino acid sequence for examination. The election of a single sequence for examination is not a species election.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are separate and distinct because the product of Invention I is not directly used in the method step of Invention II.

The products of Inventions I and III are patentably distinct having different modes of operation, function and structure.

Inventions II and III are patentably distinct because the method of Invention II does not use the product of Invention III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Furthermore, the inventions have acquired a separate status in the art as a separate subject for inventive effect and require independent searches. The search for each of the above inventions is not co-extensive particularly with regard to the literature search. A reference, which would anticipate the invention of one group, would not necessarily anticipate or make obvious the other group. Moreover, as to the question of burden of search, classification of subject matter is merely one indication of the burdensome nature of the search involved. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, election of a single group for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(l).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
